*You'll feel the REAL difference—
naturally*

Be informed. The fact is there is no legal definition for *natural*. In addition, a chemist's definition of *organic* simply requires a molecule to contain carbon. This means there are neither legal guidelines nor boundaries for manufacturers regarding substances used in their "natural" products. These so-called *natural* cosmetics often contain potentially harmful or irritating chemicals.

The **Eniva Corporation** is committed to providing **REAL**, natural personal care products with a commitment of safety. The **Everyday Essentials Body Care** line delivers on this design.
